

WHITE PAPER

Name: ON

Symbol: ONLIVE

Decimals: 18

Blockchain: Polygon Mainnet

Total Supply: 3.000.000.000

INTRODUCTION:

The ON Token is the native utility and settlement asset of the ONLIVE ecosystem, a decentralized Web3 platform designed to deliver global access to real-world digital experiences and information services. ONLIVE connects physical locations with digital infrastructure, enabling users to explore immersive 3D tours and access premium content either through direct ON-based payments or via a free, advertising-supported access model. ON has a fixed total supply of 3 billion tokens, ensuring long-term transparency, scarcity, and economic predictability. The token operates independently of central banks, inflationary monetary systems, and traditional financial intermediaries. Within the ONLIVE ecosystem, ON functions as the core economic layer.

Security and trust are foundational principles of ONLIVE. The ON Token smart contract has been developed with a strong focus on robustness and transparency and has undergone a comprehensive audit by Cyberscope, a globally recognized blockchain security firm. This audit confirms compliance with high international security standards and provides a reliable and secure foundation for users, partners, and the continued expansion of the ONLIVE ecosystem.

Token Contract: 0x14F74e11F0d9D469A4c9D686cfB18a771b31D94f

I. Vision

“Turn ON the World ” expresses ONLIVE’s long-term vision to digitally map, represent, and make the physical world globally accessible through decentralized Web3 infrastructure. ONLIVE seeks to establish an open digital layer of reality in which real-world locations, objects, and spaces are transformed into persistent, high-fidelity digital representations that can be accessed universally, without centralized control, geographic barriers, or platform dependency. ONLIVE envisions a future where the physical and digital worlds converge into a unified access economy. The initial phase of this vision focuses on the systematic exploration, digitization, and high-quality 3D scanning of relevant real-world environments and objects. These digital twins form the structural foundation of a global digital access layer, enabling immersive virtual exploration, education, and interaction. Over time, this layer evolves into a decentralized spatial internet, where access to reality itself becomes programmable, transparent, and globally distributed.

Building upon this foundation, ONLIVE aims to position itself as a leading infrastructure provider in the decentralized VR domain. By integrating blockchain-based access control, tokenized settlement mechanisms, and persistent immersive environments, ONLIVE enables a new class of virtual experiences that operate independently of centralized platforms, closed ecosystems, and traditional financial systems. Access, ownership, and participation are governed by open protocols rather than corporate intermediaries. At the core of this architecture lies the ON Token as the economic backbone of the ecosystem. ON functions as a neutral, scarce, and predictable value medium that enables permissionless access, value exchange, and participation across ONLIVE’s digital environments. With its fixed supply and utility-driven design, the token anchors ecosystem growth to real-world digitization and measurable usage, rather than speculative dynamics or advertising-based incentives.

ONLIVE does not seek to digitize the world for control, surveillance, or extraction, but for access and empowerment. By transforming physical reality into an open, decentralized digital layer, ONLIVE aims to enable individuals, creators, institutions, and communities to explore, build, and interact within a shared global digital space. Through this approach, ONLIVE aspires to become a foundational pillar of the decentralized VR and Web3 access economy, where the world is not owned by platforms, but made accessible to everyone.

II. Ecosystem

The ONLIVE Ecosystem is a decentralized, blockchain-based digital access infrastructure designed to make real-world locations, cultural assets, and information services globally accessible through Web3 technology. Built on the Polygon blockchain, ONLIVE combines high scalability, low transaction costs, and energy-efficient consensus mechanisms to enable seamless, permissionless access without dependence on centralized platforms or traditional financial systems. ONLIVE bridges the physical and digital worlds by transforming real locations, historical sites, and culturally significant objects into persistent, high-quality digital representations. Through immersive 3D environments, users are able to explore, experience, and understand places and contexts that would otherwise be limited by geography, cost, or physical accessibility. This approach establishes a global digital access layer that allows reality itself to be explored digitally. A central objective of the ONLIVE Ecosystem is to meaningfully enhance the quality of education, particularly in the fields of history and cultural studies. By providing realistic virtual access to historically and culturally relevant locations, ONLIVE enables experiential learning that goes beyond traditional text-based education. Students can engage with historical spaces in their original context, fostering deeper understanding, spatial awareness, and long-term knowledge retention.

The ONLIVE Web & App platform serves as the primary interface of the ecosystem, offering intuitive access to immersive virtual experiences and curated digital environments. The platform is designed to support a wide range of use cases, including formal education, remote learning, cultural preservation, tourism, and lifelong learning. Its modular architecture allows for continuous expansion while maintaining openness and interoperability. Rather than operating as a centralized content platform, ONLIVE functions as an open digital infrastructure. Cultural institutions, educators, historians, and local communities can contribute to the ecosystem by creating, maintaining, and expanding digital representations of real-world heritage. This decentralized approach supports transparency, long-term preservation, and resistance to centralized control or historical revisionism. By combining decentralized technology, immersive spatial experiences, and an education-focused mission, the ONLIVE Ecosystem establishes a durable foundation for global access to historical and cultural knowledge, ensuring that the world's shared heritage can be explored, understood, and preserved for future generations.

III. Liquidity Strategy

The liquidity strategy of ONLIVE is designed to establish a transparent, decentralized, and long-term stable market foundation for the ON Token. Its primary objective is to ensure durable liquidity, economic predictability, and resilience against short-term market dynamics through clearly defined mechanisms and long-term commitments.

Following the completion of the first PreSale, a decentralized liquidity pool for the ON / POL trading pair will be created on Uniswap V3. This pool forms the foundational liquidity layer of the ONLIVE ecosystem and enables open, permissionless market participation from the outset. Prior to the launch of the second PreSale, the ON / POL liquidity position will be locked until January 1, 2030. This long-term lock is intended to eliminate liquidity withdrawal risk and to demonstrate a clear commitment to permanent decentralized liquidity as the economic backbone of the ecosystem. In parallel, a second PreSale will be conducted with the objective of establishing a decentralized gold reserve in the form of PAX Gold (PAXG). This reserve is designed to enhance the long-term stability of the ON Token by anchoring part of the ecosystem's value to physical gold. Gold has historically preserved value across currencies, monetary systems, and economic cycles, making it a suitable long-term stabilizing asset. The PAXG reserve will be created following the second PreSale and locked until January 1, 2030, ensuring long-term protection and availability independent of short-term market conditions.

The ON Token operates under a strictly non-inflationary model. The total supply of 3,000,000,000 ON is fixed and immutable. After completion of the second PreSale, the full token supply will be in circulation, with the sole exception of a strategic reserve of 300,000 ON. This reserve is not intended for speculative use, but serves exclusively as a liquidity management instrument to support long-term market stability and ensure the continued availability of decentralized liquidity when required. Through the combination of permanently secured core liquidity, a decentralized gold reserve, and a strictly limited strategic reserve, ONLIVE establishes a liquidity framework focused on sustainability rather than short-term optimization. All mechanisms are designed to operate transparently, without reliance on centralized intermediaries, and with a long-term horizon extending to 2030 and beyond. This approach reflects ONLIVE's commitment to economic discipline, decentralization, and long-term value preservation as foundational principles of the ecosystem.

IV. Tokenomics

The tokenomics are designed to support long-term stability, transparency, and sustainable value creation across the ecosystem. The distribution model follows a conservative and clearly defined structure that prioritizes decentralization, market integrity, and long-term alignment between all stakeholders.

The ON Token has a fixed maximum supply of 3,000,000,000 ON, which is immutable and cannot be increased under any circumstances. No inflationary mechanisms exist. This fixed supply ensures long-term scarcity, economic predictability, and resistance to dilution, forming a stable foundation for the ecosystem's growth.

Founders – 30% (900,000,000 ON)

Thirty percent of the total token supply is allocated to the founders and early contributors who played a decisive role in the conceptualization, financing, and technical realization of ONLIVE. This allocation reflects the long-term responsibility, strategic commitment, and economic risk assumed during the early stages of the project. The founding group consists of private contributors and early supporters who provided the initial capital, infrastructure development, and ecosystem design necessary to bring ONLIVE into existence. The founders' allocation is intended to align incentives over the long term and ensure sustained involvement in the strategic direction, security, and continued development of the ecosystem.

Strategic Reserve – 10% (300,000,000 ON)

Ten percent of the total supply is allocated to a strategic reserve designed to safeguard the long-term stability and adaptability of the ONLIVE ecosystem. This reserve will be locked until January 1, 2027, preventing premature use and reinforcing long-term discipline. The strategic reserve may only be deployed for exceptional opportunities that demonstrably benefit the ecosystem as a whole. Any potential use of these tokens requires explicit community approval. Governance decisions regarding the strategic reserve are conducted transparently through public community voting, ensuring decentralized oversight and accountability.

Marketing – 20% (600,000,000 ON)

Twenty percent of the total supply is allocated to marketing and community development initiatives. This allocation is used primarily to establish strategic partnerships, expand ecosystem visibility, and reward highly active and valuable community members for their contributions. Marketing activities follow a hybrid approach, combining both online and offline initiatives, with all compensation and incentives distributed exclusively in ON tokens. This allocation also covers remuneration for community managers who are engaged during intensive growth and outreach phases. These roles are deployed selectively and compensated in ON, ensuring that ecosystem expansion remains aligned with token utility and participation.

PreSale – 15% (360,000,000 ON)

Fifteen percent of the total token supply is allocated to PreSale activities. This allocation includes the tokens sold during the initial PreSale, tokens distributed through decentralized market sales prior to the second PreSale, and tokens sold as part of the second PreSale conducted for the establishment of the decentralized gold reserve. Any ON tokens remaining unsold after the completion of the second PreSale will be reassigned to the marketing and community development allocation. This mechanism ensures efficient capital utilization while supporting broader awareness and adoption of the ON Token.

Liquidity Pools – 15% (360,000,000 ON)

Fifteen percent of the total supply is designated for decentralized liquidity provision. The long-term objective is to maintain a balanced liquidity structure representing approximately fifteen percent of the circulating ON supply, distributed evenly between POL and PAX Gold (PAXG)-based liquidity pools. This balanced liquidity approach is designed to support long-term market depth and stability, with the intention that the ON Token's value foundation reflects a 50:50 exposure between network-native liquidity and gold-backed reserve liquidity. By anchoring liquidity to both digital and real-world value references, ONLIVE aims to promote resilience and reduced volatility over extended market cycles.

V. Transparency & Security

Transparency and security constitute fundamental principles of the ON Token and the ONLIVE ecosystem. All ON Token transactions are publicly recorded on the Polygon blockchain and can be independently verified at any time. The underlying smart contract is published and verified on Polygonscan, allowing public review of its structure, implemented functions, and key parameters directly on-chain. Relevant contract information and official contact details are likewise made available via Polygonscan to ensure traceability and formal transparency.

In accordance with ONLIVE's decentralized approach, material decisions regarding the ongoing development of the project are subject to community-based voting processes. Such votes are conducted through the project's official communication channels, in particular via the official X account. This framework enables community participation in decision-making processes, including, but not limited to, considerations regarding a potential listing of the ON Token on centralized trading platforms. The objective of this approach is to facilitate transparent, collective decision-making rather than centralized control.

Official statements, announcements, and project-related information are disseminated through designated information channels to ensure consistent and verifiable communication. In addition, ongoing updates and time-sensitive notices may be shared via the official ONLIVE X channel and the Telegram community. Designated contact channels, including email and Telegram, are provided for general inquiries and project-related feedback.

To assess the technical implementation and security-related aspects of the ON Token, the smart contract has been reviewed by Cyberscope. This review was conducted to identify potential technical risks and to evaluate the implemented security mechanisms. ONLIVE intends to continue applying reasonable measures to maintain transparency and technical integrity in support of a reliable and verifiable operation of the ecosystem.

VI. Management

The ON Token and the broader ONLIVE ecosystem are managed by THE ONLIVE L.L.C., a legally registered entity headquartered in the Republic of Kosovo. The company serves as the organizational backbone of the project, ensuring that all administrative, strategic, and operational processes are conducted transparently and in alignment with the project's long-term vision.

At its core, ONLIVE pursues the principle of maximum decentralization. The role of THE ONLIVE L.L.C. is therefore not to exercise centralized control, but rather to facilitate the global expansion of the ONLIVE vision and to actively support the creation and growth of a strong, independent, and engaged international community. The company functions as the structural framework that enables ONLIVE to operate efficiently while remaining true to its decentralized philosophy.

In addition to project management and strategic coordination, THE ONLIVE L.L.C. is responsible for official communication, transparency, and community engagement. To ensure open and verified communication, the company operates the following official channels:

Official Website:	https://www.ontoken.io
Official YouTube Channel:	https://www.youtube.com/@ONTOKEN_OFFICIAL
Official X (Twitter) Account:	https://www.x.com/ON_TOKEN
Official Telegram Channel:	https://t.me/ontoken1
Official Discord Server:	https://discord.gg/S4GSvFBnR3
Offical Contact Email:	office@ontoken.io

Through these communication platforms, ONLIVE ensures direct, transparent, and continuous interaction with its global audience. All official announcements, updates, and strategic developments are exclusively communicated through these verified channels to maintain credibility and consistency.

By combining professional management through THE ONLIVE L.L.C. with a community-driven governance model, ONLIVE establishes a balanced framework that unites organizational stability with decentralized participation, forming the foundation for sustainable growth, trust, and innovation within the ONLIVE ecosystem.

VII. Polygon Blockchain

The ONLIVE ecosystem and the ON Token are deployed on the Polygon blockchain to provide a scalable and efficient technological foundation for decentralized digital infrastructure. As an Ethereum Layer-2 solution, Polygon enables high transaction throughput, low fees, and fast finality while maintaining compatibility with Ethereum's security model.

The architecture is designed to support continuous on-chain interactions, including access management, token-based transactions, and community participation, without introducing network congestion or significant latency. Polygon's low transaction costs ensure broad economic accessibility and reduce structural barriers to participation.

Full compatibility with the Ethereum Virtual Machine (EVM) allows ONLIVE to leverage established smart contract standards, developer tooling, and security practices. This interoperability enables the integration of decentralized applications and future Web3 components while avoiding the scalability constraints of the Ethereum mainnet.

The choice of Polygon reflects ONLIVE's objective to operate a cost-efficient, scalable, and resilient decentralized system capable of supporting long-term ecosystem growth.

VIII. Risk Factors

While ONLIVE is developed with a focus on transparency, technical robustness, and long-term sustainability, participation in the ONLIVE ecosystem involves risks inherent to blockchain-based systems and digital assets. The project operates within a dynamic technological, regulatory, and economic environment, which may influence development, adoption, and market behavior over time.

ONLIVE relies on the Polygon blockchain as its primary technical infrastructure. As with any system built on external network technology, changes in the performance, security, scalability, regulatory treatment, or long-term viability of the underlying blockchain may affect the functionality and efficiency of the ONLIVE ecosystem. Although Polygon is a widely adopted and established Ethereum Layer-2 solution, dependency on third-party infrastructure remains an inherent structural consideration.

In addition, the broader digital asset market is subject to significant volatility. Market conditions, regulatory developments, macroeconomic factors, and shifts in participant sentiment may impact token valuations and ecosystem dynamics independently of ONLIVE's technical progress or platform development. As a result, fluctuations in market conditions may occur that are not directly related to the operational performance of the ecosystem.

ONLIVE seeks to address these considerations through conservative system design, transparent governance processes, ongoing technical maintenance, and long-term structural measures intended to support ecosystem resilience. However, such measures cannot eliminate all external or systemic risks associated with decentralized technologies and digital assets.

Participation in the ONLIVE ecosystem is voluntary and requires an independent assessment of the associated risks. Prospective participants are encouraged to conduct their own research, evaluate their individual risk tolerance, and, where appropriate, seek independent professional advice before engaging with blockchain-based systems or digital assets.

IX. Roadmap

ONLIVE follows a phased development strategy focused on building a resilient decentralized access infrastructure rather than a short-term platform release. The roadmap emphasizes technical foundations, gradual ecosystem expansion, and long-term usability, with each phase designed to support sustainable growth and global accessibility.

2025 – Foundation & Launch Phase

- Launch of the ON Token (ONLIVE)
- Successful first Pre-Sale
- Liquidity Pool Launch (ON/POL) on Uniswap
- More than 500 ON Token Holders
- CoinGecko listing

2026 – Expansion & Decentralization Phase

- Successful second Pre-Sale
- Establishment of a Decentralized Gold Reserve
- Launch of the Ecosystem
- CoinMarketCap Listing
- More than 10,000 ON Token Holders

An updated version of this White Paper will be published on January 1, 2027, providing a revised roadmap and outlining subsequent development stages based on technological progress, ecosystem adoption, and regulatory considerations.

X. Legal Disclaimer

This White Paper (the “Document”) has been prepared solely for informational and transparency purposes. It provides a technical, conceptual, and descriptive overview of the ONLIVE ecosystem and the ON Token (“ON”) and does not constitute investment advice, financial advice, legal advice, tax advice, or any other form of regulated advice. This Document is not a prospectus, offering memorandum, or disclosure document within the meaning of applicable laws or regulations in the European Union, the Republic of Kosovo, or any other jurisdiction.

Nothing contained in this Document shall be construed as an offer to sell, a solicitation to buy, or a recommendation to acquire any tokens, securities, financial instruments, or investment products. Any references to the ON Token, its functionality, or potential use cases are provided for descriptive purposes only and are non-binding. Access to this Document does not imply eligibility to acquire, hold, or use the ON Token. Participation in any token-related activity may be restricted or prohibited in certain jurisdictions and remains subject to compliance with all applicable local laws and regulations.

The ON Token is not intended to constitute a financial instrument, security, transferable security, investment product, or regulated crypto-asset within the meaning of Directive 2014/65/EU (MiFID II), Regulation (EU) 2017/1129 (Prospectus Regulation), or Regulation (EU) 2023/1114 (Markets in Crypto-Assets Regulation – MiCA). Regulatory frameworks applicable to digital assets are evolving, and no assurance can be given that the ON Token will not be classified differently by regulatory authorities in the future. ONLIVE L.L.C. makes no representations or warranties regarding the current or future regulatory treatment of the ON Token in any jurisdiction.

The legal and regulatory framework for digital assets in the Republic of Kosovo is still under development and may be subject to material changes. Nothing in this Document shall be interpreted as confirmation that the ON Token or the ONLIVE ecosystem complies with any current or future licensing, registration, authorization, or supervisory requirements under

Kosovo law. Each participant remains solely responsible for assessing and complying with all applicable legal and regulatory obligations in their respective jurisdiction.

The ON Token does not represent equity, ownership, debt, profit participation, revenue sharing, dividends, or any claim against ONLIVE L.L.C. or any affiliated entity. There is no guarantee of value, price stability, liquidity, market demand, exchange listings, ecosystem adoption, or future utility. The ON Token may lose part or all of its value, and any interaction with the token or the ecosystem is undertaken entirely at the participant's own risk.

Participation in blockchain-based systems involves inherent risks, including but not limited to market volatility, liquidity constraints, smart contract vulnerabilities, protocol failures, cybersecurity incidents, governance changes, regulatory interventions, taxation changes, and the loss of private keys or access credentials. These risks may result in partial or total loss of digital assets and cannot be fully mitigated.

The ONLIVE ecosystem relies on third-party technologies and infrastructure, including but not limited to the Polygon blockchain, decentralized exchanges, smart contract frameworks, and external software components. Any disruption, modification, exploit, governance decision, fee structure change, or regulatory action affecting such third-party systems may adversely impact the functionality, availability, or value of the ON Token and the ONLIVE ecosystem. Structural measures such as liquidity locks, reserves, or diversification strategies do not eliminate these risks.

This Document may contain forward-looking statements relating to planned features, development timelines, technical objectives, or strategic initiatives. Such statements are based on assumptions and expectations at the time of publication and are subject to uncertainty and change. Actual outcomes may differ materially, and there is no obligation to update or revise any forward-looking statements.

Tax treatment of digital assets varies by jurisdiction and individual circumstances. ONLIVE L.L.C. does not provide tax advice. Each participant is solely responsible for determining and fulfilling any tax obligations arising from interaction with the ON Token or the ONLIVE ecosystem.

To the fullest extent permitted by applicable law, ONLIVE L.L.C., its founders, directors, officers, employees, contractors, and partners disclaim any liability for direct or indirect loss, damage, or claim arising from reliance on this Document, participation in the ONLIVE ecosystem, or the acquisition, holding, or use of the ON Token. By accessing or using this Document, the reader acknowledges that they understand and accept the risks described herein, confirm that they are legally permitted to engage with blockchain-based systems under the laws applicable to them, and agree to this Disclaimer in its entirety.
